

MAYO HOSPITAL, LAHORE

<u>STANDARD OPERATING PROCEDURE</u> PREVENTION OF SHARPS CONTAINING SPILLAGE		SOP No.	MHL/IPC/007
		Revision No.	1.0
		Issue Date	29-01-2019
Approvals	Title	Signature/Date	
Prepared by	Ms. Sana Aslam Microbiologist/Infection Control Officer		
Approved by	Dr. Tahir Khalil Chief Operating Officer, Mayo Hospital Lahore.		

Purpose:

To describe the procedure for prevention of sharps containing spillage

Scope:

It is applicable in the wards of hospital

Responsibility:

Nursing staff

Procedure:

- Nominate a member of staff to keep the public well clear of the area.
- If possible exclude the public from the area until the hazard has been removed.
- Do not touch any needles or syringes.
- Call a suitably trained member of staff to deal with the spillage.
- Put on strong, protective gloves, overalls, stout shoes, and, if necessary goggles which are located the unit.
- Use a pair of tongs or forceps to return the used equipment to a sharps container. These items are located in the unit.
- Clear away the equipment as quickly and safely as possible.
- Check the area thoroughly for loose sharps.
- Return sharps container to its storage place.
- Clean the affected area thoroughly with a disinfectant.
- Remove gloves, overalls and shoes and return to their storage place.

Loose Sharps

- **NEVER** attempt to re-sheath a needle – this is the most common cause of needle stick injuries.
- If a needle or syringe is left on the counter or accidentally dropped, do not touch it or attempt to move it.
- Keep the public well away from the area.
- The pharmacist or trained member of staff should deal with the needle.
